SEPTIC SYSTEM ABANDONMENT

Abandonment of subsurface sewage disposal system components (i.e., septic tank, hollow leaching structures) or cesspools shall be performed in such a manner as to eliminate the danger of the system components or structure inadvertently collapsing. The responsibility for abandonment lies with the property owner.

- Structures that are to be abandoned shall be emptied of all sewage/wastewater prior to abandonment.
- A licensed Septic Pumper must pump out the septic tank and any hollow structures.
- Structures shall be filled with sand/gravel or crushed, and then the area backfilled with clean soil.

You must contact the Milford Health Department to schedule an inspection at least one working day before the work will be completed.
